this volume contains papers contributed to the nato advanced research workshop nonlinear evolution of spatio temporal structures in dissipative continuous systems held in streitberg fed rep germany sept 24 through 30 1989 the purpose of the rather long title has been to focus attention on a particularly fruitful direction of research within the broad field covered by terms like nonlinear dynamics or non equilibrium systems after physicists have been occupied for several decades mainly with the

microscopic structure of matter recent years have witnessed a resurgence of interest in macroscopic patterns and dynamics research on these latter phenomena has not been dormant of course since fluid dynamicists interested in the origin of turbulence meteorologists studying weather patterns and numerous other scientists have continued to advance the understanding of the structures relevant to their disciplines the recent progress in the dynamics of nonlinear systems with few degrees of freedom and the discovery of universal laws such as the feigenbaum scaling of period doubling cascades has given rise to new hopes for the understanding of common principles underlying the spontaneous formation of structures in extended continuous systems

enterprising the internet has been a process over the past years and while this book does not set judgement it does call for a moment of pause and reflection on the impact of these technologies to individuals there are constant key themes throughout this book such as the notion of identity and identity sets e sovereignty and privacy but most importantly the function of an internet that is inclusive and not controlled by a few organizations for their own profitability this is the humanized internet these tenets may sound libertarian but in fact we are talking about the core principles that guide the development and perhaps the return of the internet to the people especially those who are underserved do no evil should not just be a company motto but the driving principle behind the development of any technologies that do impact us as individual consumers of these technologies and corresponding products indeed there is a polarity between and internet that is used for mass empowerment and one that can be used for mass destruction privacy security and the management of your digital footprint should be done by you with the progression of human and machine interaction due to advances in biotech and the brain computer interface the cloud and virtual mixed reality we need to understand the impacts of these technologies to identity overall do we require a new definition of identity what is e sovereignty and its application moving forward if we posit that the institutions that exist today may no longer be relevant in their current structure we have all read about the abuses that occur when your data falls into the hands of other entities intentionally or not the humanized internet is therefore a call to action your action

entrepreneurs such as samuel morse and rupert murdoch carve new markets from the emerging technology and proclaim that the old rules no longer apply book jacket

previous books on growth management in the united states favor balanced growth which suggests that growth and environmental protection represent equally legitimate objectives taking issue with the balanced growth position this book argues that further growth is unsustainable and that growth management must focus on ensuring ecological sustainability the book opens with the arguments supporting current global limits to growth and then shows that the growth management movement in the united states represents an institutionalized form of ongoing growth accommodation

which is incongruous with sustainable behavior the book also documents the historical pro growth tendency of the planning profession and contends that this bias is impeding the necessary transition to a sustainable future in addition it presents the standards courts use to decide the legality of growth management programs and suggests that those standards do not present insurmountable obstacles to stopping future growth in conclusion this book presents operational measures of ecological sustainability and argues that the growth imperative currently driving the growth management movement must be replaced by the imperative of ecological sustainability

these proceedings contain the papers presented at the 5th ifac ifip gi gma workshop on experience with the management of software projects msp 95 held in karlsruhe germany 27 29 september 1995 emphasis was placed on technical aspects but new aspects of the software life cycle also appeared among the technical issues it would seem that test methods are seeing a revival and simulation and modelling techniques are starting to be used for the project management process proper within the software development life cycle re use and reverse engineering have become established components and reports on experience with the application of formal approaches are becoming more distinct an important topic covered was configuration management the more common it becomes for software to be developed as a system of components having individual life cycles rather than as one consistent piece then the more important it is to have methods for administering such components separately whilst still enabling the designer to build consistent systems out of them the workshop overall was rated better than average by participants and a good percentage of papers were recommended for publication in a journal it can also be said that the workshop reflected the improvement in technology transfer time in software and the coming of age of software engineering in general
